

SHAMWARI
FOUNDATION
WILDLIFE - ENVIRONMENT - COMMUNITY

Water Conservation Projects

The Eastern Cape experienced its longest drought in history between 2015 and 2023, lasting eight years. Thankfully, 2024 brought much-needed relief. With a semi-arid climate, periodic water scarcity and erratic rainfall, the Shamwari Foundation is actively involved in water conservation within the Reserve to sustain the diverse wildlife and ecosystems.

Threats faced due to water shortages:

- Dehydration or death of wildlife
- Soil erosion and loss of essential plant life
- Reduced biodiversity

We combat water shortages by:

- Real-time, electronic borehole monitoring systems
- Ensuring sustainable usage and preventing over-extraction

CONTRIBUTE TO THE GLOBAL WATER CRISIS RESOLUTION

With a global water crisis becoming increasingly evident, sustained water conservation is crucial for the wellbeing of our communities, wildlife, and the environment.
